CHAPTER-7

FUNCTIONAL AND PERFORMANCE TESTING

7.1 - Performance Testing (Trigger Testing) :

In jewel management CRM systems, **Apex triggers** (or equivalent backend logic) automate tasks like updating inventory, sending notifications, or calculating loyalty points. Performance testing ensures these triggers:

- Execute efficiently under load
- Don't breach platform limits (e.g., Salesforce governor limits)
- Maintain data integrity during bulk operations

🔍 Key Performance Metrics to Monitor

Metric	Why It Matters
CPU Time	Measures processing time—critical for complex workflows
SOQL/DML Limits	Ensures queries and updates stay within safe thresholds
Trigger Execution Time	Identifies slow or inefficient logic
Bulk Data Handling	Validates performance during mass imports or updates
Error Rate	Tracks failures or exceptions during trigger runs
